SUMMARY

Consultant-turned-engineer who bridges the gap between business problems and data infrastructure. I don't just build dashboards; I design the pipelines, KPI frameworks, and systems that make them work. 3.5 years delivering end-to-end analytics for global clients across logistics, retail, and financial operations; now building full-stack, AI-driven analytics platforms at UMass Boston (MS Business Analytics, GPA 4.0).

EXPERIENCE

University of Massachusetts Boston – Boston, MA

Sep 2025 – Present

Graduate Research Assistant – Data Engineering & Analytics

- Architected a full-stack patent analysis platform (FastAPI, Python, Next.js, SQLite, Redis) from the ground up, translating a complex, expert-only research process into a structured, accessible tool for students and early-stage innovators; system handles 10+ structured idea attributes per submission.
- Engineered a multi-stage retrieval pipeline: CPC classification layer converts natural language inputs into targeted queries, live patent data fetched via SerpAPI (Google Patents), then re-ranked using embedding-based semantic similarity, returning top 3–5 results with explainable similarity scores and matched concept reasoning.
- Developed queue-based async processing (Redis + RQ) to handle long-running ranking tasks at scale; built session-based auth (PBKDF2), role access controls, user feedback voting, and SQL logging capturing 100% of search requests, all feeding a continuous improvement loop ahead of student pilot launch.

Cypress Atlantic – Boston, MA

Jun 2025 – Sep 2025

Data & Business Analytics Intern

- Engineered ETL pipelines integrating POS sales data, OCR invoice extraction, and Google Drive API to process 24+ months of transactional records with >95% accuracy; streamlined ingestion of 10–20 vendor invoices per month, eliminating manual data entry.
- Developed 6+ Power BI dashboards tracking revenue, COGS, labor, and operating expenses; applied reconciliation logic to surface 0.5–1% revenue variance across reporting systems, supporting SMB acquisition decisions.

Thorogood – Bangalore, India

Dec 2020 – Jun 2024

Data and Analytics Consultant → promoted to **Manager, Data and Analytics** (Jun 2023)

- Conducted end-to-end business analysis for global clients across logistics, retail, and financial operations, gathering stakeholder requirements, performed root cause analysis, and translated findings into KPI frameworks and data models; introduced 8+ new KPIs improving visibility into SKU movement, inventory planning, and demand fulfillment.
- Delivered 15+ scalable analytics solutions including ETL pipelines, data warehouses, and Power BI dashboards enabling up to 35% faster decision-making; led Tableau-to-Power BI migration for 6 dashboards, recognized in Unilever client newsletter.
- As Manager:** led cross-functional India–U.S. team to design a supply chain data pipeline reducing logistics bottlenecks by 20%; mentored 3 junior analysts across 5–10 dashboard projects and improved team retention by 15%.
- Contributed to \$300K+ in new client engagements by optimizing 5+ proposals; represented Thorogood at 3 international events, securing 10+ qualified leads per event.

EDUCATION

MS in Business Analytics, University of Massachusetts Boston

2024 – 2026 | GPA: 4.0

Specialization: Supply Chain Management

BE in Electrical & Electronics Engineering, RV College of Engineering

2016 – 2020

PROJECTS

Best Buy Laptop Pricing Analytics: End-to-end analytics pipeline to identify pricing and discount patterns. Applied ML-based segmentation to surface how product attributes and visibility correlate with discounting behaviour. Stack: Python, SQLite, machine learning.

CERTIFICATIONS

Salesforce Certified Platform Administrator · Salesforce

Apr 2026

Power BI Data Analyst Associate · Microsoft

Sep 2022

Python Essential Training · LinkedIn Learning

Mar 2025

ACHIEVEMENTS

- Passion Award – Thorogood (2022):** Recognized for leading development and deployment of an automated end-to-end supply chain analytics system delivering real-time insights across all supply chain streams.
- Beta Gamma Sigma (2026):** Inducted at UMass Boston; awarded to top-performing students at AACSB-accredited institutions for academic excellence and leadership.

TECHNICAL SKILLS

Languages & Tools: SQL · Python · R · DAX · Power BI · Tableau · Alteryx · Advanced Excel

Data Engineering: ETL · Data Modeling · Data Warehousing · Pipeline Automation · FastAPI · Redis · Azure Data Factory · Azure Databricks · AWS

Analytics & Supply Chain: KPI Design · Dashboarding · Demand Forecasting · Inventory Planning · S&OP · Requirements Gathering · Root Cause Analysis · Process Improvement

Collaboration: Stakeholder Engagement · Agile Delivery · Cross-Functional Leadership
